Question 1 (1 point)

CSC1016S Assignment 1A (Lab Question)

Basic Syntax

Assignment Instructions

THIS QUESTION TO BE COMPLETED DURING YOUR LABORATORY SESSION

This assignment involves constructing Java programs that use input and output statements, and statements that perform numerical manipulation.

You may need a few of the mathematical functions and constants provided by the Math class:

- To obtain the square root of numeric values, use the `Math.sqrt()` function. For example, `Math.sqrt(4)` will compute the value `2.0`.
- If you need a value for π, use `Math.PI`.
- Powers can be calculated using the `Math.pow()` function. For example, `Math.pow(2, 3)` will compute the value `8.0`.

You will also want to be able to print decimal numbers to a specified number of places. Consult your lecture notes and section 2.1 of Absolute Java 6th Edition.

Question 1 [50 marks]

The volume of a pyramid of height h and with a square base of length s is calculated using the following equation:

$$s^2 \frac{h}{}$$
